These prices are an average across multiple battery end-uses, including different types of electric vehicles, buses and stationary storage projects. For battery electric vehicle (BEV) packs in particular, prices were \$118/kWh on a volume-weighted average basis in 2021. At the cell level, average BEV prices were just \$97/kWh.

<div class="df_qntext">How much will EV batteries cost in 2030?

Looking ahead, analysts expect battery costs to fall even further, reaching \$56-\$80 per kWh by 2030. If this happens, EVs will become significantly cheaper than gasoline cars, making them the clear choice for consumers. This will also impact energy storage, making home and grid-scale battery solutions far more affordable.

<div class="df_qntext">What happened to battery prices in 2010 & 2020?

Battery prices fell 89% from 2010 to 2020. Between 2010 and 2020, battery prices dropped nearly 90%. This dramatic decrease was a game changer for the electric vehicle industry. Ten years earlier, EVs were extremely expensive, with batteries making up the majority of the cost.

<div class="df_qntext">How much will EV battery cost by 2035?

By 2035, battery costs could reach as low as \$50 per kWh, making EVs even cheaper than traditional gasoline cars. The prospect of battery costs plummeting to \$50 per kWh by 2035 isn't just a cost reduction; it's a paradigm shift.
