

Abstract: This paper systematically analyzes the geological theories of hydrocarbon accumulation and summarizes the exploration achievements made by Changqing oilfield in the Ordos ...

Changqing oilfield, China's largest oil-and-gas field, produced over 65 million tonnes of oil equivalent (TOE) of crude oil and natural gas in 2022, setting a new record for output in China's ...

Changqing Oilfield also studied and formulated the distributed PV development plan and technological innovation roadway while strengthening efforts for transformation of PV power and technical system, ...

The research results have successfully broken through technical bottlenecks such as annular motive sealing and inner pipe string sealing, and formed key technology of gas well snubbing operation, ...

It is crucial to develop proper engineering parameters to achieve the dual goals of enhanced oil recovery (EOR) and CO storage. This paper reports systematic numerical case studies of the first-ever CCUS ...

Changqing has successfully developed five major gas fields, including Sulige, Jinbian, shenmu, yulin and zizhou. Sulige gas field, situated in Maowusu Desert of the Ordos Basin, is by far the largest ...

Changqing oilfield, China's largest oil-and-gas field, achieved a historic milestone recently by producing a cumulative total of 1 billion metric tons of oil and gas equivalent, according to PetroChina ...

Taking the Ordos Basin as an example, this paper proposed that the construction of an energy super basin should follow the principle of "more energy, less carbon, and better energy ...

The capacity construction project group of Changqing oilfield needs to repeatedly enter the same data into multiple different information systems of the company every day. This work mode causes many ...

On May 22, new progress was made in the pilot test of nano flooding technology in Jiyuan Oilfield of Changqing Oilfield. Jointly developed by several CNPC affiliated research institutions, it is expected ...

The annual output of Changqing stayed at 1 million ton level until the end of the 20th century. In the new millennium, this mature oilfield has revived with the fastest increase both in reserves and production ...

The CCUS Demonstration Project consists of two parts: the "Ningdong Base Carbon Source Capture Project," managed by China Energy's Ningxia Coal Industry, and the "Changqing ...

Changqing oilfield emergency solar container bidding

Changqing Oilfield takes technological innovation as the power source, timely adjusts exploration ideas, deeply promotes a new round of prospecting breakthrough strategic actions, ...

Abstract PetroChina Changqing Oilfield Company (hereinafter referred to as Changqing Oilfield) built the largest oil and gas production base of China in the Ordos Basin in 2013, achieving ...

Abstract Abstract: Changqing Oilfield has conducted intermittent oil extraction service cumulatively for 64000 well times during the 13 th Five-year Plan period. The key indexes of artificial lifting, such as ...
