<div class="df\_qntext">How many charging piles are there?

The demand for slow charging piles is only 18. Its total number is 30. There is a reduction of 80% compared with the 153 charging piles obtained from the charging demand forecast. Assume that the time cost of electric vehicles to queue or transfer to a new charging station is the same as the time cost of fuel vehicles.

<div class="df\_qntext">How to optimize the configuration of electric vehicle charging piles?

When optimizing the configuration of electric vehicle charging piles, it's necessary to consider the limited number of charging piles in the parking lot. We assume that the charging information can be shared with EVs in real-time to provide decisions for charging decisions and path planning. 3.11.2.

<div class="df\_qntext">How to build charging piles in China?

The Chinese government has made great efforts to build charging piles. At present, the most popular construction mode is to build charging piles on a fixed proportion of spaces in existing parking lots. The proportions of charging piles recommended by the government, which is known as a one-size-fits-all strategy.

<div class="df\_qntext">What is the optimization model for charging piles?

The optimization model aims to design the configuration of charging piles to minimize the sum of electric vehicle queueing time, gasoline vehicle queueing time, and vehicle transfer time to idle parking lots. The model is solved by the genetic algorithm. This paper takes the Wulin Square business district in Hangzhou as a real-world example.

<div class="df\_qntext">Do redundant charging piles increase the time cost of electric vehicles?

Assume that the time cost of electric vehicles to queue or transfer to a new charging station is the same as the time cost of fuel vehicles. It can be concluded that redundant charging piles will increase the time cost of GVs and reduce the travel cost of EVs, thus increasing the time cost of all vehicles when the number of EVs is small.

<div class="df\_qntext">What happens if a car has a fast-charging pile?

If there is a fast-charging pile, the vehicle will choose fast charging; otherwise, the car has two options. Option one is to queue up in the target parking lot and calculate the number of vehicles queued for fast charging and estimated queuing time.
