

China embarked last year on its biggest coal-power building boom in a decade, reinforcing the role of the dirtiest fossil fuel in its energy mix even as it aims to transition to renewables.

The coal sector was placed back at the centre of energy security planning. Numerous mine expansions were approved, particularly in Inner Mongolia and Shaanxi, while new projects were ...

Coal was first used in China for ornaments starting about 6000 years ago. Its use as fuel for households and light industry began about 2000 years ago, but coal production and ...

Coal mines that have been abandoned or will close by the end of this decade hold enough potential photovoltaic (PV) solar capacity to power a country the size of Germany for a year, ...
