

# Clean solar container configuration requirements and standards

<div class="df\_qntext">What are solar & storage standards?

These standards assure that solar and storage systems have been ethically, sustainably, and responsibly sourced, manufactured, transported, installed, operated, and recycled. How to Participate The following opportunities for participation are available:

<div class="df\_qntext">How many installers does a solarcontainer need?

At least 3-4 installers and 1 crane operator are needed to put the Solarcontainer into operation within one day. How many households can one Solarcontainer supply with electricity?

<div class="df\_qntext">What is a solarcontainer?

The Solarcontainer is a photovoltaic power plant that was specially developed as a mobile power generator with collapsible PV modules as a mobile solar system, a grid-independent solution represents. Solar panels lay flat on the ground. This position ensures maximum energy harvest Panels lays flat on the ground.

<div class="df\_qntext">How many households can a solar Container Supply?

Based on an average power consumption of a 4-person household of 4000 kWh per year and a location in Southern Germany, the solar container can supply approx. 32 households with climate-friendly electricity. At a location in Southern Europe it can even be up to 50 households due to the high solar radiation.

<div class="df\_qntext">What are the requirements for PV installation and maintenance?

The installation process should comply with the safety regulations applicable to all the system's components, including but not limited to cables, terminals, charging monitors, batteries, inverters, etc. The installation and maintenance of PV modules and systems must be done by licensed electricians or other qualified personnel.
