

Coal chemical industry and hydrogen solar container

<div class="df_qntext">Can coal chemical industries be integrated with green hydrogen production?

The integration of coal chemical industries with green hydrogen production enables the organic combination of coal mining, coal chemicals, and renewable electricity, marking a critical pathway for the decarbonization of the coal chemical sector.

<div class="df_qntext">Can Green H₂ be used in the coal chemical sector?

Onsite use of green H₂ in the coal chemical sector is a win-win opportunity. First, green H₂ can be used in the coal chemical sector for carbon-free feedstocks. Second, the coal chemical sector, which uses the most H₂ of any sector in China, will facilitate scale-up and cost reductions for green H₂ production.

<div class="df_qntext">Does coal chemical industry need a hydrogen supply?

The coal chemical industry requires a stable and continuous hydrogen supply, yet it predominantly depends on gray hydrogen derived from fossil fuels like natural gas and coal cracking, which contradicts energy-saving and carbon reduction objectives.

<div class="df_qntext">How can a coal chemical plant deploy solar power?

Also, coal chemical plants can distribute deployment using rooftop PV and distributed wind turbines to fully utilize space within plant areas. In practice, a pilot project (~0.5 km²) has been operated since 2021 in Ningxia that deploys solar power and water electrolyzers in a coal chemical plant covering 13 km².

<div class="df_qntext">Does China's coal chemical sector use coal as a fuel?

Nature Communications 14, Article number: 8104 (2023) Cite this article China's coal chemical sector uses coal as both a fuel and feedstock and its increasing greenhouse gas (GHG) emissions are hard to abate by electrification alone.

<div class="df_qntext">Can a source-network-hydrogen system supply downstream coal chemical industries?

By establishing wind-solar power plants in coal mining areas and integrating renewable electricity with electrolysis-based green hydrogen production in off-grid or grid-connected systems, a source-network-hydrogen system can be created to directly supply downstream coal chemical industries.

Therefore, traditional coal gasification to produce chemicals typically utilizes a water gas shift (WGS) unit to enhance the H₂/CO ratio in the shifted syngas [6]. However, this unit also ...

An integrated wind-solar demonstration project for green hydrogen production broke ground in Ordos, North China's Inner Mongolia Autonomous Region, on Feb 16. It is the first green ...

On November 20th, the 150,000-kilowatt integrated demonstration project of wind, solar, storage and

hydrogen production by China Datang Daolun entered full-scale market operation. This ...

This study offers valuable insights for designing green electricity-based hydrogen production systems in the coal chemical industry and provides guidance for determining the optimal ...

Based on this demonstration project, the "green electricity hydrogen coupling coal chemical industry integrated energy management system" has been successfully included in the list of the fifth batch of ...

The increasing demand for hydrogen, together with the growing coal chemical industry, deterioration of crude oil, upgrading of fuel oil quality, and progress in hydrogen energy technologies, ...

Checkforupdates China's coal chemical sector uses coal as both a fuel and feedstock and its increasing greenhouse gas (GHG) emissions are hard to abate by electrification alone.

As a major source of global CO₂ emissions, the chemical sector faces significant decarbonization challenges, particularly in methanol production, which is a highly carbon-intensive ...

This study offers valuable insights for designing green electricity-based hydrogen production systems in the coal chemical industry and provides guidance for determining the optimal wind-solar ratio.

Finally, the economic performance of the system is studied. Results show that the integrated system of wind power, solar power, PV power, and hydrogen energy storage for the coal ...

Because of its abundant coal resources--versus its limited conventional oil and gas endowment--in addition to rising investment in typical chemical manufacturing segments including organic and ...

Recently, the 150,000-kilowatt wind-solar-hydrogen integrated demonstration project and the 175,000-kilowatt renewable energy substitution project of the Datang Duolun coal-to ...

The chemical reactions of coal pyrolysis, gasification, and liquefaction are mainly determined by the structure and reactivity of coal, while chemical engineering processes mainly ...

These chemical products demand a hydrogen-rich feedstock, contrasting with coal's inherent carbon-to-hydrogen ratio. Traditional hydrogen production methods, involving carbon ...

Hami in Xinjiang is one of China's comprehensive energy bases. However, in recent years, this region has been plagued by some problems affecting the development of the energy industry. For example, ...

H₂ can serve as a direct raw material and be used to synthesize methanol [13], ethylene glycol (EG) [14], ammonia [15, 16], urea [17], and other chemicals. Shi et al. [18] developed ...

Accelerating green hydrogen development and refining business operations to drive new momentum for green growth The refining and chemical industry is key to China's pursuit of carbon neutrality. ...

China has begun full-scale operation of its first green hydrogen-integrated coal-to-chemicals complex, presenting a replicable model for decarbonizing the coal chemical industry. China Datang ...

The integration of coal chemical industries with green hydrogen production enables the organic combination of coal mining, coal chemicals, and renewable electricity, marking a critical pathway for ...

In the tender for the Uxin Banner Integrated Wind-Solar-Hydrogen Production Project by Sinopec's Zhongtian Hechuang Energy Co., Ltd., LONGi Hydrogen secured the winning bid by ...

Here we explore the GHG mitigation potential and costs for onsite deployment of green H₂ and O₂ in China's coal chemical sector, using a life-cycle assessment and techno-economic ...
