

Green buildings must be equipped with solar container facilities

<div class="df_qntext">Can green buildings achieve net zero energy consumption?

Additionally, the integration between these resources is considered a promising approach to achieving net zero energy consumption. This paper also aims to emphasize the positive effects that these green buildings have on people, the environment, and the economy, which ensures their survival.

<div class="df_qntext">What are the requirements based on Part IIB - environmental sustainability measures?

Requirements Based on Part IIB- Environmental Sustainability Measures for Existing Buildings in the Building Control Act, owners of existing buildings must: Comply with the minimum environmental sustainability standard for major energy-use change. See details below. Submit periodic energy efficiency audits of the building's cooling systems.

<div class="df_qntext">Are green buildings sustainable?

Green buildings are designed and constructed according to the principles of sustainable development and are an inevitable trend in future architectural development.

<div class="df_qntext">What is the Green Building Regulation?

This regulation is intended to solve multiple issues in the existing green regulatory framework, introducing mandatory policies around green buildings, including for the first time a clear mandatory standard for carbon emission intensity, which solves the problem of no clear quantitative index requirements for building carbon emissions in the past.

<div class="df_qntext">How can a building achieve an all-round Sustainable Built Environment?

To achieve an all-round sustainable built environment, it is important to ensure that existing buildings continue to operate efficiently throughout their life cycle. Requirements Based on Part IIB- Environmental Sustainability Measures for Existing Buildings in the Building Control Act, owners of existing buildings must:

<div class="df_qntext">Why do we need green buildings?

Under the common vision of the world facing climate change while promoting carbon neutral development goals, more and more countries have joined the team to promote the development of green buildings and have formulated relevant policies and plans to promote energy conservation and emission reduction in buildings.

Innovative perspectives focusing on new alternatives for reefer container storage are lacking in practice and in the literature. This research introduces a novel solution based on the design ...

Installing photovoltaic (PV) solar panels on building roofs is already common in sunny climates. Buildings account for a relatively small fraction of a container terminal's area, but even a medium ...

Green buildings must be equipped with solar container facilities

Nearly-zero energy buildings Nearly-zero energy buildings, is a requirement introduced by the Energy Performance of Buildings Directive EU/31/2010 (revised in 2018). It means that all new buildings - as ...

Additionally, the new rules mandate that all new buildings must be equipped to accommodate solar energy installations, such as rooftop photovoltaic devices. The EPBD forms a ...

The primary objective of this paper is to introduce and assess the viability of an innovative infrastructure termed Underground Reefer Container Storage (URCS) devised to mitigate ...

In today's dynamic energy landscape, harnessing sustainable power sources has become more critical than ever. Among the innovative solutions paving the way forward, solar energy ...

Green building practices are increasingly recognized as a powerful driver for realizing the United Nations Sustainable Development Goals (SDGs). By introducing innovative approaches to ...

The Energy Performance of Buildings Directive in Article 10, mandates increased deployment of suitable solar energy installations on new buildings and certain existing non-residential ...

This paper discusses the role of green buildings in achieving the UN's SDGs and investigates the issues related to their design and barriers. It is clearly demonstrated that the reliance ...

We look at how green building and sustainable infrastructure across FedEx facilities in Asia Pacific are contributing to our goal to achieve carbon-neutral operations by 2040.

Minimum Environmental Sustainability StandardMandatory Periodic Energy AuditsSubmission RequirementsMandatory periodic energy audits ensure that cooling systems continue to operate efficiently throughout a building's lifespan, allowing building owners to continuously reap energy saving benefits. Find out more about the submission procedure for periodic energy audits.Shanghai Green Building Regulations_Local RulesWhen selling new green buildings, the development unit must specify the green building star rating, performance indicators, facilities, and equipment in the sales contract and clearly display this ...
