

Honeycomb solar container treatment

<div class="df_qntext">What is a honeycomb solar collector & thermal energy storage module?

An innovative new translucent honeycomb solar collector and thermal energy storage module has been designed. The honeycomb module contains two different kinds of channels, namely empty ones and those that are filled with a Phase Change Material (PCM). The latter are sealed at the front and back side and, therefore, form chambers.

<div class="df_qntext">How to optimize honeycomb structures under thermal or mechanical stress?

In order to optimize honeycomb structures under thermal or mechanical stress, FEM modules are used. We have the experience and the required equipment to determine the thermomechanical or mechanical parameters of the honeycomb structures.

<div class="df_qntext">What are honeycomb ceramics used for?

The carrier structures for the catalytic purification of combustion gas from gasoline engines and for the filtration of soot particles from the exhaust flows of diesel engines consist of honeycomb ceramics. Furthermore, honeycomb ceramics are used for the treatment of industrial exhaust flows loaded with various organic and inorganic contaminants.

<div class="df_qntext">How does solar charging work in a PCM storage device?

The theory presented up-to-heredescribes the solar charging of the PCM storage device and the diffusion and phase transition phenomena in the PCM. However, additionally, the "empty" channels allow a crossing of the storage device by a heat transfer fluid, which usually is air.

<div class="df_qntext">What materials are used to make honeycomb ceramics?

We develop and manufacture honeycomb ceramics from siliceous materials (cordierite or mullite), oxide ceramics (aluminum oxide), perovskites or other oxide combinations, and from sintered metals with external dimensions of 6 to 94 mm, even to 160 mm for proof-of-principal tests, with cell densities of up to 325 cpsi (cells per square inch).

Honeycomb is made of hydrophobic beeswax and aligned vertical channels, which provide excellent hydrophobicity and advantageous mechanical strength. Based on the primary bio ...

Aluminum Honeycomb Panel: A Composite Material for Whole-House Customization Surface Finish: Available in a variety of finishes such as wood grain, metallic, and high-gloss. Core: Aerospace ...

Tired of solar-powered water treatment plants playing "hide-and-seek" with power during cloudy days? Our guide breaks down how BESS Container with Water Treatment Integration crushes the EU's ...

A honeycomb double exposure solar still has been designed to enhance the productivity throughout the day.

Experiments have been carried out to predict the performance of the proposed still in October ...

EconCore, world leader in economic honeycomb sandwich material production technology, and Solarge, producer of lightweight, truly circular solar panels, will launch at JEC World ...

Design considerations for solar collectors with cylindrical glass honeycombs 203 R~sum6--Une structure cellulaire convenablement con~ue, placée entre l'absorbeur solaire et la ...

A glass tube honeycomb solar collector, composed of a conventional single-glazed flat-plate water cooled nonselective black absorber with a cylindrical glass honeycomb mounted between the plate ...

Abstract SiC w /Al 2 O 3 honeycomb ceramics were engaged as sensible shell materials for encapsulating Al-Si alloys (latent heat materials) in the honeycomb holes to obtain alloy/ceramic ...

A new translucent honeycomb solar energy collecting and storing module was designed. In this article this module is described in detail and first scientific results of its performance ...

A new proposal of high performance flat plate solar thermal collector (FPC) based on Transparent Insulation Materials (TIM) combining silica aerogel contained in insulation containers with...

This work provides a potential solution for practical solar desalination with efficient performance and long-term stability in seawater evaporation by honeycomb-structured fabric.

Here, we demonstrate an efficiency enhancement for hybrid nanostructured Si/polymer solar cells based on a novel Si honeycomb (SiHC) structure using a simple etching method. SiHC structures are ...

In this study, novel high-temperature alloy/honeycomb ceramic composite materials for solar sensible-latent thermal storage applications had been prepared by encapsulating Al-Si alloys in ...

Honeycomb-structured solar cell is proposed for photovoltaic building block applications. Honeycomb-like substrates were prepared either by a conventional semiconductor processing or by a ...
