

How does power storage make money

<div class="df_qntext">How does energy storage make money?

Energy storage is shifting electricity, and it makes money from buying, selling, and trading the difference between low- and high-priced hours in the market. Storage assets therefore depend on price spreads, which tend to be higher with more imbalances. Imbalances, in return, are driven by more renewables.

<div class="df_qntext">Why is energy storage important?

Additionally, energy storage can enable independent power producers to participate in various market segments and provide more flexible and reliable energy services. Energy storage can help to smooth out the intermittency of renewable energy sources and stabilize the grid, which can lead to more stable and predictable market prices.
