

How to configure the power and capacity of solar container on the user side

<div class="df_qntext">How do I configure a solar inverter?

On the home screen, an advanced user can tap Settings to set power grid, protection, and feature parameters for the solar inverter. The configurable solar inverter parameters vary with the solar inverter model and grid code. The displayed parameters prevail. The parameter list provided in this section includes all configurable parameters.

<div class="df_qntext">How do I know if a solar inverter has a maximum input voltage?

The maximum input voltage can be queried from the product nameplate or the user manual. Delivering a reset, factory reset, shutdown, or upgrade command to the solar inverters may cause power grid connection failure, which affects the energy yield.

<div class="df_qntext">How do I view the energy yields of a solar inverter?

You can query information about energy yields of all solar inverters connected to the SmartLogger. Tap Day, Month, Year, or History to display the daily, monthly, yearly, or historical energy yield information. A common user can choose More > Settings to set user parameters for the SmartLogger.

<div class="df_qntext">How to connect a solar inverter to a phone?

The USB data cable is delivered with the phone. The port type of the USB data cable connected to the solar inverter is USB 2.0. The user accounts that can log in to the app are classified into common users, special users, and advanced users. You can set different user permissions based on the responsibilities of PV plant operation personnel.

<div class="df_qntext">How does a solar inverter connect to the upper-layer management unit?

The solar inverter can connect to the upper-layer management unit over the Modbus RTU, SunSpec, or AVM protocol. When the solar inverter connects to the support tracking system, only the Modbus RTU protocol is supported.

<div class="df_qntext">How do I connect a solar inverter to a management unit?

The solar inverter can connect to the upper-layer management unit over the Modbus RTU, SunSpec, or AVM protocol. Set the communications address of the SUN2000 when it connects to the upper-level management unit, which should not conflict with the addresses of other devices on the same bus.

SolarEdge's Storage Solution can be used for various applications that enable energy independence for system owners, by utilizing a battery to store energy and supply power as needed.
