

# How to make a world bloodthirsty solar container device

How do you make a solar still water system?

It is also possible to make a very basic solar still water system by simply digging a large enough hole, covering it with a plastic sheet and letting the sun do the rest. But to produce a few gallons or litres per day with a reasonable amount of success, you require a still that is designed for the job of distilling water.

How to make a solar still with plastic bottles?

Here's another way to make a solar still with plastic bottles. It only works if you have a source of dirty water. You'll need two bottles which have lids and also some tape. You'll also need a sharp knife for cutting the bottle lids. Cut the top out of the bottle lids. Line up the lids and tape them together.

How do you make a solar still?

You'd likely need multiple solar stills to get even a cupful of water. This is the easiest way to make a solar still. All you need is 1 plastic bottle (easy to find pretty much anywhere because of all the litter around!) and a way to cut the bottle (another reason to always carry a good survival knife or multitool).

Can you make a dug solar still with a plastic shopping bag?

In theory, you can make a dug solar still with a white plastic shopping bag that you cut open, but it won't work as well. The sheet also needs to be very large. Myth Busters and Ray Mears did episodes on this where they used GIANT plastic sheets and only managed to collect about a cup of water.

What is a DIY solar still?

DIY solar stills can be made to any shape, size or design to suit the area or location to where they will be used. They can be mounted on roofs or as "on-ground" structures at the location of choice. Insulated pans and basins help reduce heat loss, while thin glass increases efficiency as the thinner the glass, the better.

What material should a solar still box be made from?

Casing Material: This is the material you'll build the solar still box from. You can use almost anything in a pinch, but it should really be as waterproof as possible. Stainless steel is good, or all-weather plywood that is treated with your paint and silicone that we'll get to in a minute.

How Does A Solar Still Work? Method 1: Plastic Water Bottle Solar Still Method 2: Two-Bottle Solar Still Method 3: Dug Solar Still Method 4: Built Solar Still Solar distillers work by using heat from sunlight to evaporate water. Impurities are left behind as the water evaporates. The evaporated water then condenses on a surface and drips into a collection container. [primalsurvivor](#)
