

How to quickly store energy

<div class="df_qntext">How do you store energy?

You can store electricity in electrical batteries, or convert it into heat and stored in a heat battery. You can also store heat in thermal storage, such as a hot water cylinder. Energy storage can be useful if you already generate your own renewable energy, as it lets you use more of your low carbon energy.

<div class="df_qntext">How can energy storage be used for long-term energy management?

Finally, we have seasonal storage, which stores energy over weeks or months. Technologies like pumped hydro, compressed air, and hydrogen storage are promising in this area. Although their efficiency may be lower, their massive storage potential makes them valuable for long-term energy management.

<div class="df_qntext">Why is electricity storage important?

With increasing power outages, rising energy costs, and a growing push toward renewable energy, storing electricity efficiently helps you maintain control, reduce your environmental footprint, and enjoy reliable power. Here's a simple infographic summarizing how electricity storage technologies work and their critical role in our energy system:

You can also store heat in thermal storage, such as a hot water cylinder. Energy storage can be useful if you already generate your own renewable energy, as it lets you use more of your low carbon energy. It reduces wasted energy and is more cost effective than exporting excess electricity.

<div class="df_qntext">How do energy storage systems work?

Energy storage systems let you capture heat or electricity when it's readily available. This kind of readily available energy is typically renewable energy. By storing it to use later, you make more use of renewable energy sources and are less reliant on fossil fuels. Let's look at how they work and what the different types of energy storage are.

First, work out what kind of energy storage is best suited to your home. For England, Wales and Northern Ireland, use Go Renewable's free online tool to find recommended energy solutions for you. For Scotland, visit our home renewables selector tool. Once you know what you need, we recommend getting quotes from at least three different installers.
