<div class="df_qntext">Why is antimony a problem in mining and refining?

The antimony diversity of supply of both mining and refining is low. Almost 70% of Sb is mined as by- or co-product. Companion metals can both have higher and lower resilience. An additional 25% of Sb production comes from post-consumer recycling. Stockpiling has played a role in dampening and exacerbating supply disruptions.

<div class="df_qntext">Is Antimony mining a risk factor for supply disruptions?

From 1990 to 2018 antimony mining was highly concentrated. The vertical integration of the largest mining and refining companies in 2018 also indicated a lower diversity of supply on a company level. We found that based on production volume, most antimony is mined as a by-product, which increases the vulnerability to supply disruptions.

<div class="df_qntext">Does recycling increase antimony supply?

We found that the antimony diversity of supply of both mining and refining is low, but is enhanced by recycling, around 25% of global antimony supply is produced via recycling of antimony bearing metal alloys. Based on production volume, almost 70% of antimony was mined as by- or co-product in 2018, indicating a high supply risk.

<div class="df_qntext">Can antimony selenide be used as a photovoltaic absorber?

Finally, in solar energy applications antimony selenide is emerging as a new photovoltaic absorber material, combining abundant, low toxicity materials with rapidly improving efficiencies (Hutter et al., 2018).

<div class="df_qntext">Why is antimony a problem in China?

This resulted in a production delay in China's refineries for several months (Argusmedia, 2021). Since over 60% of global supply originates from China, this caused a large supply disruption. Antimony is of high importance for a wide range of products.

<div class="df_qntext">Where are artisanal antimony ores found?

Artisanal antimony ores are mined in Ecuador, Honduras, Laos, Morocco, Mozambique, Pakistan and South Africa (Roskill 2018, in Perpetua Resources, 2021). Formally there is only mining from small scale cooperatives in Bolivia reported, but no artisanal mining.
