

Lithium sodium solar container

<div class="df_qntext">Are sodium-ion batteries the future of energy storage?

The growth of renewable energies over the last decade has created a surging demand for better energy storage solutions. While lithium-ion (Li-ion) technology remains the forerunner in the battery space, sodium-ion batteries are emerging as a promising alternative, especially in applications in which cost is a key criterion.

<div class="df_qntext">Are sodium ion batteries a good alternative to Li-ion?

Sodium-ion batteries are a cost-effective alternative to Li-ion batteries, using sodium instead of lithium. However, these batteries have low energy density (about 140-160 Wh/kg). Yet, Rota noted, "This lower density of sodium-ion is less of an issue in energy storage systems, where space is not as constrained--in particular on solar plants."

<div class="df_qntext">What are the functions of CATL lithium-ion battery energy storage system?

The functions of CATL's lithium-ion battery energy storage system include capacity increasing and expansion, backup power supply, etc. It can adopt more renewable energy in power transmission and distribution in order to ensure the safe, stable, efficient and low-cost operation of the power grid.

<div class="df_qntext">What is a sodium ion battery?

Sodium-ion batteries are suitable for applications in which lower cost is a must, such as battery ESSes.

<div class="df_qntext">Could sodium-ion be an alternative to lithium ion?

Natural abundance of sodium and better fire safety features are the two main reasons many are pinning their hopes on sodium-ion as an alternative to lithium-ion, with the latter's supply chain shocks of 2021 and 2022 and relatively rare but high-profile fire incidents causing major challenges for the energy storage industry to-date.

<div class="df_qntext">Are sodium ion batteries safe?

"In terms of cycling, the typical solar + storage cycling [about 1 to 1.3 cycles per day for 20 years] also fits quite well with sodium-ion cell-cycling performance." Finally, sodium-ion batteries present interesting safety characteristics, on par or better than Li-ion LFP cells. This means a lower fire risk at the project level, Rota said.
