

<div class="df_qntext">What is a solarcontainer?

The Solarcontainer is a photovoltaic power plant that was specially developed as a mobile power generator with collapsible PV modules as a mobile solar system, a grid-independent solution represents. Solar panels lay flat on the ground. This position ensures maximum energy harvest. Panels lay flat on the ground.

<div class="df_qntext">What is a solarfold photovoltaic container?

The Solarfold photovoltaic container can be used anywhere and is characterized by its flexible and lightweight substructure. The semi-automatic electric drive brings the mobile photovoltaic system over a length of almost 130 meters quickly and without effort into operation in a very short time.

<div class="df_qntext">What is a mobile photovoltaic system?

That is why we have developed a mobile photovoltaic system with the aim of achieving maximum use of solar energy while at the same time being compact in design, easy to transport and quick to set up. This system is realized through the unique combination of innovative and advanced container technology.

<div class="df_qntext">How can PV modules be mounted on a substructure?

PV modules can be mounted onto the substructure using either corrosion-proof M8 bolts placed through the mounting holes on the rear of the modules or with specially designed module clamps. 5.2.1.1. Mounting with Bolts

<div class="df_qntext">Do AE solar modules have mounting holes?

To maximize the mounting structure's lifetime, AE Solar recommends using corrosion-proof (stainless steel) fixtures. The frame of each module has mounting holes placed to optimize the load handling capability, to secure the modules to the mounting structure. Please refer to the module datasheet for the number of holes, dimensions and placement.

<div class="df_qntext">How does a solarfold storage system work?

The storage system is based on proven lithium-ion technology (LiFePO) and sophisticated electronics. The on-grid version of the solarfold container is connected directly to the public power grid and can supply up to 40 single-family homes with the energy produced (energy requirement of 3,500 kW/year/single-family house).
