<div class="df_qntext">What is the optimal scheduling model for power system peak load regulation?

Conclusion This paper presented an optimal scheduling model for power system peak load regulation considering the short-time startup and shutdown operations of a thermal power unit. As the main resource on the generation side, the intrinsic capacity of the thermal units in the system peak load regulation was studied in this paper.

<div class="df_qntext">What is power system peak load regulation?

The power system peak load regulation is conducted by adjusting the output power and operating states of the power generating units in both peak and off-peak hours.

<div class="df_qntext">Can peak load regulation cost of thermal units be integrated into optimal scheduling?

In addition, an integrated optimal scheduling model for power system peak load regulation with a suitable rolling optimization strategy was proposed. To the best of our knowledge, this study is the first to integrate different modes' peak load regulation cost of thermal units into the optimal scheduling model.

<div class="df_qntext">Can a concentrated solar power plant with an electric heater join peak regulation?

Therefore, a concentrated solar power (CSP) plant equipped with an electric heater (EH) is implemented to join the peak regulation, and the joint peak regulation strategy between thermal power units (TPUs) and a CSP plant is proposed. Firstly, the peak regulation principle of a CSP plant with EH is analyzed in detail.

<div class="df_qntext">Do thermal power units have intrinsic capacity in peak load regulation?

The intrinsic capacity of the thermal units in the system peak load regulation is studied on the generation side. An improved linear UC model considering startup and shutdown trajectories of thermal power units is embedded with the peak load regulation compensation rules.

<div class="df_qntext">Do thermal power units participate in peak regulation auxiliary services?

Owing to China's energy structure, thermal power accounts for nearly half of the country's installed power generation capacity. Although the willingness of thermal power units to participate in peak regulation auxiliary services is low, we propose a peak regulation cost compensation and capacity-proportional allocation mechanism.
