<div class="df\_qntext">Why are China's energy storage stations so low?

However,the scale of new independent energy storage stations put into operation in China in the first three quarters of 2022 was approximately 345.5MW,which was significantly lower than planned or under construction stations. The main reason for this may be that investors lack motivation.

<div class="df\_qntext">How big is China's energy storage capacity?

According to CNESA data,the capacity of independent energy storage stations planned or under construction in China in the first half of 2022 was 45.3GW,accounting for over 80% of all new energy storage projects planned or under construction.

<div class="df\_qntext">Will the energy storage industry thrive in the next stage?

The energy storage industry is going through a critical period of transition from the early commercial stage to development on a large scale. Whether it can thrive in the next stage depends on its economics.

<div class="df\_qntext">How many electrochemical storage stations are there in China?

In terms of developments in China,19 members of the National Power Safety Production Committee operated a total of 472 electrochemical storage stationsas of the end of 2022,with a total stored energy of 14.1GWh,a year-on-year increase of 127%.
