

Peru water storage station

Is water delivered in Peru sanitary?

Water delivered in Peru tends to be unsanitary and non-potable. However, wealthier citizens are more easily able to treat water in their homes, while poorer citizens often lack the resources to properly treat their water.

Do we have access to safe water and sanitation in Peru?

And, thanks to new financial partners, we are increasingly present in the Andes, the jungle and rural areas, reaching, as always, the families living at the base of the economic pyramid that need access to safe water and sanitation at home. 5.8 million people now have access to safe water or sanitation in Peru.

Does Peru have a water resource problem?

Although a thorough assessment of the net impacts on Peru's water resources is still lacking, some trends are discernible.

What is the new water and sanitation management model in Peru?

In 2006-07 nine small towns (between 5,000 and 25,000 inhabitants) across Peru introduced a new water and sanitation management model, under which the community is being more empowered, including through deciding themselves about a certain level of service quality, such as low-cost technologies, and corresponding tariffs.

Water used by sector in Peru: Agriculture, Industry, and Municipal; Water precipitation in depth and total volume; Water Dependency Ratio; Renewable Water Resources in total and per capita; People with ...
