This accredited course equips participants with the latest knowledge on how solar photovoltaic systems are designed and installed, and how they are grid-connected or operated as stand-alone in a real-world environment. The course enables participants to work successfully in the renewables and solar energy industry, both locally and internationally.

<div class="df_qntext">What do students need to know about solar energy installation?

Students are expected to assembly solar energy panel system by connecting the electrical components with proper wiring and connection. Familiarization of solar cell installation procedure and safety. Reading an technical drawing of electrical diagram and cisrcuit.

<div class="df_qntext">What is a solar PV maintenance training system?

This Solar PV Maintenance Training System allows students to develop the specialized skills and knowledge needed for working with the common types of PV systems. The trainer teaches connection, operation, programming and troubleshooting of AC/DC and grid-connected systems. Understand the principles of Solar Tracking System.

<div class="df_qntext">What is a solar training system?

Used to provide simulated "Sun" sources for the photovoltaic solar modules that are used in Solar Training Systems. This enables the training systems to be used indoor as this light source will replace the sun for generating PV power. This unit adds convinience to the classroom workshop as experiments can be done indoors, even on cloudy days.
