

The capacity of pumped storage power stations is also affected by construction conditions, cost and the economics of other peak-shaving approaches of the power system. In China, ...

With the continuous development and improvement of China's electricity market, pumped storage power stations participating in the electricity spot market will face complex ...

Abstract The pumped storage power station (PSPS) is a special power source that has flexible operation modes and multiple functions. With the rapid economic development in China, the ...

Pumped storage power stations pump water to reservoirs at higher locations by using surplus green electricity during off-peak consumption periods, then regenerate to meet emerging ...

This paper focuses on the social, economic, and environmental benefits of village development during the construction and operation of a pumped-storage power station (PSPS) in ...

This research establishes a comprehensive framework for the conversion of conventional hydropower stations into pumped storage facilities, offering a model for medium-small ...

This article aims to depict the spatiotemporal distribution pattern and main influencing factors of China's pumped storage power generation (PSPG) and provides practical support for ...

The first large-type pumped storage power station in Sichuan Province, the Lianghekou hybrid pumped storage power station faces the challenges of how to better match hydropower project ...

In addition, the pumped storage power station can also be used as a start power supply to restore power supply in time after the occurrence of a major power outage to ensure the rapid and orderly recovery ...

Construction of pumped storage power stations among cascade reservoirs to support the high-quality power supply of the hydro-wind-photovoltaic power generation system Zhiqiang Jing ...

China's pumped-storage installed capacity remains the largest in the world, but industry experts said relying solely on the State Grid for construction will no longer be sufficient to ...

To address the problem of unstable large-scale supply of China's renewable energy, the proposal and accelerated growth of new power systems has promoted the construction and ...

Evaluating and analysing a pumped storage power station as a research object. According to the results, the level of sustainable development of the pumped storage power station ...

This value evaluation method could provide references for pumped storage investment decisions, subsidy policies, and price mechanisms to fully utilize the role of pumped storage power ...

Analyzing the construction subject, design unit and typical technical and economic index of pumped storage projects. It reflects the development direction and problems of China's ...

This book, as one of the China-ASEAN Clean Energy Capacity Building Programme technical materials, comprehensively outlines the development of pumped storage power stations at ...

Based on the construction status of China's electricity market and policy development planning, this paper studies the main positioning of pumped storage power stations and combines the ...

Power Station is the most mature large-scale energy storage method at present, and it is an important part of the new power system with new energy as the main body. In order to adapt to ...
