<div class="df_qntext">Why do roller presses have a high pressure?

It is primarily the pressure which the rollers press against one another with that decides the magnitude of stress that the roller surface is exposed to. When the pressure is as high as it is on roller presses, it means high stresses and high risk of damage.

<div class="df_qntext">Do roller presses use oil circulation lubrication?

This implies use of oil circulation lubrication, Modern roller press design has thus been adapted to take this particular design factor into consideration, Gear and bearing units are often designed equipped with oil circulation lubrication. This method offers several lubricating and economic advantages: 1.
