<div class="df_qntext">What is a variable inductor?

Probably the most common type of variable inductor today is one with a moveable ferrite magnetic core,which can be slid or screwed in or out of the coil. Moving the core farther into the coil increases the permeability,increasing the magnetic field and the inductance.

<div class="df_qntext">What is a Magnetic Inductor?

A magnetic inductor is an electrical passive component that consists of a certain number of turns of wire. It introduces magnetic inductance to an electrical circuit to produce a magnetic flux or to mechanically react to magnetic flux variations.

<div class="df_qntext">How do inductors work?

An inductor is a component consisting of a wire or other conductor shaped to increase the magnetic flux through the circuit, usually in the shape of a coil or helix, with two terminals. Winding the wire into a coil increases the number of times the magnetic flux lines link the circuit, increasing the field and thus the inductance.
