

# Solar container inverter control mode

<div class="df\_qntext">Which control modes can control the active output power of the inverter?

Active Power Control The following modes can control the active output power of the inverter: RRCRActive Power Limit Wakeup Gradient P (f) If several control modes are active,the output power of the inverter will be the minimum power.

<div class="df\_qntext">What is standby mode in a solar inverter?

In Standby mode: The inverter continuously performs status checkand enters the Operating mode once the operating requirements are met. The inverter enters Shutdown mode after detecting a shutdown command or a fault after startup. The inverter converts DC power from PV strings into AC power and feeds the power to the power grid.

<div class="df\_qntext">How to configure the characteristic curve in a solar inverter?

Configure the characteristic curve under instructions from professionalsto ensure that the solar inverter works properly. The Q-U characteristic curve control mode is to dynamically adjust the ratio Q/S of output reactive power to apparent power in accordance with the ratio U/Un (%) of the actual grid voltage to the rated grid voltage.

<div class="df\_qntext">Can a solar inverter run with only active power output?

If the PV plant is not required to adjust the voltage at the grid-tied point or perform reactive power compensation, solar inverters can run with only active power output. In this case, set this parameter to No Output. Before setting this function, ensure that the DI port is not occupied. Otherwise, the setting fails.

<div class="df\_qntext">What is a control state in an inverter?

Each control state is a combination of the following three fields: AC output power limit- limits the inverter's output power to a certain percentage of its rated power with the range of 0 to 100 (% of nominal active power). CosPhi - sets the ratio of active to reactive power.

<div class="df\_qntext">What happens if a PV inverter does not receive sunlight?

If the PV modules receive no sunlight,the battery works in discharge mode,and the battery reaches the end-of-discharge capacity,the inverter enters Shutdown mode. In Standby or Operating mode,the inverter enters Shutdown mode after detecting a fault or shutdown command.
