

<div class="df_qntext">Do energy storage products need periodic maintenance?

The requirements for periodic maintenance for energy storage products should be identified by the OEM (IEEE 2010). In settings where predictive analytics maintenance is economical, guidance should also be available from the manufacturer that identifies methodologies for assessing when a product may be approaching a failure mode.

The National Park Service budgets, ideally, \$100,000 per year for O&M of this PV energy storage system (308 kW PV; 1,920 kWh battery) on Alcatraz Island. Photo by Andy Walker, NREL Figure 13 shows the PV energy storage system on Alcatraz Island.

<div class="df_qntext">How do I backup my solar monitoring system?

Reliable data backup and storage should be provided. A best practice is for data loggers to store 6 months of data and to backup data to cloud storage. A reliable method to "backhaul" the data is required. Most connect to the internet via DSL, but be aware that many site owners will not allow the solar monitoring system to use the site network.

<div class="df_qntext">Why is combining solar and storage a good idea?

Monetizing and combining all the different value propositions of combining solar and storage is an ongoing area of research and business model innovation, and will increase the market for PV and the need for financing. The more interactive nature of battery dispatch (charge/discharge) increases the "operations" part of O&M considerably.

<div class="df_qntext">Why do solar plant operators need monitored data?

Solar plant operators require monitored data to analyze and identify the root cause of performance issues observed by the operator. It is critical to identify the root cause of failure to reduce maintenance costs when dispatching service providers.

<div class="df_qntext">What are open standards for solar monitoring systems?

As it relates to the quality of the solar monitoring system, open standards are applied at four levels: Information access to the data store from applications. High-quality monitoring systems can be built with proprietary methods that encourage lock-in to a single vendor.
