

Solar container through-type terminal block

<div class="df_qntext">What are the different types of terminal blocks?

Use the feed-through terminal blocks, multi-level terminal blocks, and multi-conductor terminal blocks from Phoenix Contact for space-saving connection of two or more conductors in just one terminal block. The terminal blocks are characterized by their flexible bridgeability and optimum marking options.

<div class="df_qntext">What is a feed-through terminal block?

The terminal blocks are characterized by their flexible bridgeability and optimum marking options. Feed-through terminal block, nom. voltage: 1000 V, nominal current: 125 A, number of connections: 2, connection method: Screw connection, Rated cross section: 35 mm², cross section: 1.5 mm² - 50 mm², mounting type: NS 35/7,5, NS 35/15, color: gray

<div class="df_qntext">What types of terminal blocks are available in 3D?

These data allow a precise representation of 2-wire, 3-wire, 4-wire feed-through terminal blocks, multi-wire terminal blocks, multi-level terminal blocks such as double-level terminal blocks, three-level terminal blocks or level terminal blocks in 3D and show all relevant electrotechnical and business features.

<div class="df_qntext">What is a multi-conductor terminal block?

Multi-conductor terminal blocks are feed-through terminal blocks with three or four connections that are all routed via the same current bar. This allows you to connect up to four conductors with individual wiring per terminal block. The design of the terminal blocks means that fewer terminal blocks and supply lines are required for wiring.

<div class="df_qntext">Which terminal blocks are available for copper Litz wires?

Along with the standard feed-through terminal blocks for wiring with copper litz wires, for example, Phoenix Contact also provides Al/Cu terminal blocks. The universal terminal blocks enable the connection of aluminum and copper conductors in just one terminal block.

<div class="df_qntext">What types of terminal blocks are available for DIN rails?

2-wire, 3-wire, 4-wire feed through terminal blocks, multi wire terminal blocks, multi level terminal blocks such as double level terminal blocks, triple level terminal blocks or level terminal blocks with or without PE-function for DIN rails

Eaton offers feed-through terminal blocks and/or barrier strips that expect wire to have the conductive path managed through the housing in the rear of the block. There are varying voltage ratings and ...

PRK feed-through terminal blocks are available in six cross-section ranges from 1.5 mm²; to 16 mm²; in 2-, 3- and 4-conductor connection variants for conductor cross-sections from 0.34 mm²;
