

What are the applications of superconducting power?

Conclusion

<div class="df\_qntext">Can high-temperature superconductor cable be used in space solar power stations?

Abstract: Compared to traditional metal cable, high-temperature superconductor (HTS) cable is a promising candidate for the energy transmission in space solar power stations due to its great advantage in high power density and efficiency.

<div class="df\_qntext">Can superconducting cable power transmission reduce spacecraft energy transfer?

These cables can reduce energy losses and simplify the conventional cable transmission by eliminating the need for voltage conversion equipment, thus reducing the launch weight and costs of spacecraft. This paper analyzes the feasibility of superconducting cable power transmission in space spacecraft energy transfer.

<div class="df\_qntext">What are the applications of superconducting power?

Some application scenarios such as superconducting electric power cables and superconducting maglev trains for big cities, superconducting power station connected to renewable energy network, and liquid hydrogen or LNG cooled electric power generation/transmission/storage system at ports or power plants may achieve commercialization in the future.

<div class="df\_qntext">Are there any superconducting materials?

Since the discovery of superconductivity in mercury, lots of superconducting materials have been found.

<div class="df\_qntext">What is a high temperature superconducting material based inductive coil?

High-temperature superconducting material-based inductive coils combine superconductivity concepts with magnetic energy storage to store electrical power. High temperature Superconductive Magnetic Energy Storage (HTSMES) spindles are another common term for such kind of storage systems.

<div class="df\_qntext">Are high-temperature superconducting cuprates degenerate?

Investigating the nature of the high-temperature superconducting cuprates has been active area of research with renewed focus on the pair density wave (PDW) states. Here, the authors report several competing, nearly degenerate, PDW orders along with d-wave state in the square lattice t-J model using fermionic tensor product states method.
