

The actual effect of solar container frequency modulation

<div class="df_qntext">How is delay linearized under photovoltaic participation in frequency modulation?

The delay is linearized by Pade approximation. The frequency stability of power system under photovoltaic participation in frequency modulation is analyzed and evaluated by establishing three indicators: system frequency steady-state error, feedback system sensitivity, and closed-loop system stability margin.

<div class="df_qntext">What is the frequency response model of power system with photovoltaic?

In this paper, based on the traditional power system load frequency control model, the frequency response model of the power system with photovoltaic is constructed considering the frequency modulation of photovoltaic participating system and the influence of communication delay. The delay is linearized by Pade approximation.

<div class="df_qntext">What is dynamic frequency modulation model?

The dynamic frequency modulation model of the whole regional power grid is composed of thermal power units, energy storage systems, nonlinear frequency difference signal decomposition, fire-storage cooperative fuzzy control power distribution, energy storage system output control and other components. <div class="df_qntext">What is the frequency modulation of hybrid energy storage?

Under the four control strategies of A, B, C and D, the hybrid energy storage participating in the primary frequency modulation of the unit Δf_m is 0.00194 p.u.Hz, excluding the energy storage system when the frequency modulation Δf_m is 0.00316 p.u.Hz, compared to a decrease of 37.61 %.

<div class="df_qntext">Does photovoltaic participate in frequency regulation?

In order to clarify the frequency stability situation of power system when photovoltaic participates in frequency regulation, this paper first establishes the load frequency control (LFC) model of the power system with photovoltaic based on the analysis of the traditional LFC model of the power system.

<div class="df_qntext">What is the frequency stability of power system with photovoltaic participation?

The frequency stability of power system with photovoltaic participation in frequency regulation is characterized by system frequency steady-state error, feedback system sensitivity, and closed-loop system stability margin.
