<div class="df_qntext">Why is peak-regulation important in power grids?

Peak-regulation in power grids needs to follow the fluctuation of renewable energy generation in addition to the variable load demands. Moreover, the wind power curve usually shows opposite increasing trend to the load curve, which requires more peak-regulation supply to guarantee the secure operation of power grids.

<div class="df_qntext">What is a coordinated control strategy for voltage and frequency regulation?

Maintaining stable voltage and frequency regulation is critical for modern power systems, particularly with the integration of renewable energy sources. This study proposes a coordinated control strategy for voltage and frequency in a deregulated power system comprising six Generation Companies (GENCOs) and six Distribution Companies (DISCOs).

<div class="df_qntext">Does nuclear power have peak-regulation capacity?

In this paper, nuclear power is assumed to have no peak-regulation capacity. For renewable energy, the Renewable Energy Act of People's Republic of China stipulates that renewable energy generation can be scheduled in priority during the power grid operation.

<div class="df_qntext">What is peak-regulation capability?

Also, the peak-regulation capability determines the renewable energy consumption and power loads of cities by mitigating power output fluctuation in the regulation process of power grid.

<div class="df_qntext">Can a new peak-regulation service be established in future Chinese power grid?

It may lead to establish novel peak-regulation services in future Chinese power grid. Moreover, it is worthy to study the modification method for the derived unit commitment results, which can further improve the accuracy of the proposed evaluation method.

<div class="df_qntext">How to evaluate peak-regulation capability of power grid?

The existing approaches for evaluating peak-regulation capability of power grid contains deterministic and probabilistic methods. In Yang et al. (2010), a deterministic model was proposed to calculate the maximum capacity of downward peak-regulation considering the constraints of unit parameters.
