

# Water storage investment

<div class="df\_qntext">What is water investment?

Water investment is currently focused on water quality and quantity, emphasizing the need for new water investors to collaborate, take a portfolio approach and assess water entrepreneurs carefully.

<div class="df\_qntext">Should you invest in water-related securities?

There are multiple indexes, mutual funds, and ETFs that allow retail investors to gain exposure to water-related securities. The investment case for water is simple: water is one of the most important resources, and it is likely to become a lot scarcer. About 70% of the earth's surface is covered in water, but over 97% is saltwater.

<div class="df\_qntext">What is water investment for non-water investors?

The resulting series of workshops, "Water Investment for Non-Water Investors", was intended to provide potential investors with insights into the water sector, including trending innovations, regulatory considerations and investment strategies.

<div class="df\_qntext">Why should investors invest in water?

As water becomes increasingly critical, acting early not only presents lucrative opportunities but also allows investors to contribute meaningfully to addressing global water challenges and shaping a more resilient future.

<div class="df\_qntext">Is water a good investment area for impact investing?

While investing for impact has been steadily gaining traction, particularly in the clean energy sectors, water is an often-overlooked area of opportunity in the impact investing space. Water plays a critical role in virtually every aspect of human life.

<div class="df\_qntext">How do you invest in water?

Engage with the water sector systematically, not opportunistically. Invest with those with expertise: When starting to invest in water, invest with others. The water sector is a welcoming community, and open to guiding first-time water investors on their journey. Bundle your first co-investment with others.
