<div class="df_qntext">When should a battery energy storage system be inspected?

Sinovoltaics advice: we suggest having the logistics company come inspect your Battery Energy Storage System at the end of manufacturing, in order for them to get accustomed to the BESS design and anticipate potential roadblocks that could delay the shipping procedure of the Energy Storage System.

<div class="df_qntext">What is a battery energy storage system?

A battery energy storage system (BESS) is an electrochemical device that charges (or collects energy) from the grid or a power plant and then discharges that energy at a later time to provide electricity or other grid services when needed.

<div class="df_qntext">What should be included in a contract for an energy storage system?

Several points to include when building the contract of an Energy Storage System:

- o Description of components with critical technical parameters: power output of the PCS, capacity of the battery etc.
- o Quality standards: list the standards followed by the PCS, by the Battery pack, the battery cell directly in the contract.
