

# Which is more efficient solar container or charging solar container

<div class="df\_qntext">What is a solarcontainer?

The Solarcontainer is a photovoltaic power plant that was specially developed as a mobile power generator with collapsible PV modules as a mobile solar system, a grid-independent solution represents. Solar panels lay flat on the ground. This position ensures maximum energy harvest Panels lays flat on the ground.

<div class="df\_qntext">Can you put solar power in a shipping container?

There are many ways to skin a cat, and even more ways to add solar power to a shipping container. To be fair, I cheated a bit. Well, not really cheated, but I just went with a retail solar generator system instead of DIYing that part myself from &#224; la carte components.

<div class="df\_qntext">How powerful is a solar power system?

With 8 kWh of stored energy and nearly 1,000W of real-world power in direct sun (and often 600-800W in less-than-ideal conditions), this is a seriously powerful system for just charging up all my EVs. This could power a tiny home or other small off-grid setup like a hunting cabin.

<div class="df\_qntext">How many households can a solar Container Supply?

Based on an average power consumption of a 4-person household of 4000 kWh per year and a location in Southern Germany, the solar container can supply approx. 32 households with climate-friendly electricity. At a location in Southern Europe it can even be up to 50 households due to the high solar radiation.

<div class="df\_qntext">Are solar panels more expensive?

It's more expensive since you're paying for a pre-designed and engineered solution, but damn if it doesn't make it easy! To save a bit of money instead, you can source your own solar panels, solar charge converter, batteries, inverter, and wiring, then make it all play together.

<div class="df\_qntext">How much power does a solar panel use?

With 1,200W of theoretical power (and probably more like 900W of solid real-world Florida solar energy), that would be a decent flow rate. The panels I used are Pecron's folding panels, which aren't really meant for this type of long-term permanent installation.
